2.,	Electric power is obtained from the Majdic, Pollak, Mayer and Zirovnica hydroelectric plants, though in cases of extreme emergency the Fala plant can be used.				
3.	The finished articles are produced by adding tar, chalk and "pen" (sic) to a mixture of raw and salvaged rubber. This is manufactured into shoes; waterproof coats for the use of firemen and policemen; galoshes; all sizes of rubber tubing; tire covers, and inner tubes of all sizes.				
4.	The daily production capacity of the factory amounts to two railroad carloads of sundry rubber goods. During the latter part of 1949 the output dropped noticeably because of the lack of raw materials. This situation was improved by the efficient system of salvaging waste rubber throughout 50X1-HUM the country and raw materials are now received regularly and in satisfactory quantities. Small quantities of raw rubber are imported. The last order consisted of 28 railroad carloads which was put in storage for use in filling special orders.				
5.	The factory is working exclusively on military contracts at present. When these are filled, the factory will again return to supplying civilian orders.				
6.	The firm employs about 460 workmen, mostly specialists in vulcanization and similar trades. Sixteen people are employed in the finishing shops of the bicycle accessory department. One 12-hour shift a day is now worked.				
7.	The following are among the employees of the factory:				
	Edvard Kumpf - Administrative Director Edgar Schiller - Austrian technician Franz Mocnik - Technical Director Engineer Max Koenig - German Engineer Trantisek Palsky, a Czech from the Batz firm CLASSIFICATION SECRET/CONTROL - U.S. OFFICIALS ONLY
